# "EDUCATIONAL PERFORMANCE OF STUDENTS IN A NEW COLLEGE OF ENGINEERING A COMPUTER-AIDED STUDY" 

By<br>M.A. Sheirah* and G.S.A. Shawki**<br>Qatar University, Doha, Qatar - Arabian Gulf.

#### Abstract

A data-base computer package is herein developed to provide an effective tool for the study, evaluation and rectification of the academic performance of university students. As a test case, the newly established Faculty of Engineering at Qatar University in the Arabian Gulf is herein dealt with. Relevant results indicate that the school has establised itself, that the educational components meet the needs and that the evaluation system used proved to be quite reliable. It is herein concluded that the developed package can be adapted to any educational system and that the benefits for students and Faculty deserve serious consideration for institutions elsewhere.

## 1. INTRODUCTION

This institutional study presents the results of a most recent experiment in engineering education conducted in one of the rapidly developing countries in the Middle East, namely in the State of Qatar.

The Faculty of Engineering was first established at Qatar University in October 1980, on a credit hour system extending over some ten semesters, the total number of credit hours required for graduation being 162 hours.

[^0]The annual intake of the faculty ranges between 40 and 45 students, $80 \%$ of whom are nationals. So far two classes have graduated in the years $1985 \& 1986$.

This study aims at developing a computer-assisted data-base by means of which all bio-and educational data of engineering students can be entered, classified and retrieved with a view to throwing light on the academic performance of students with feedback as to proper measures to be taken towards the enhancement of the efficiency of the educational process.

## 2 - DATA BASE STRUCTURE

Three data-base systems are herein structured to constitute all educational information of university students following a credit hour system. The data-base III Plus Package is used on an IBM XT Personal Computer with 640 K-byte RAM and 10 M -byte hard disk.

The first of these systems is used to generate meaningful reports on the academic performance of students in any class, discipline, or department, Tables (1.1) to (1.4).

Table (1.1) displays all information regarding students' performance in all semesters attended, seven years being the maximum anticipated period for graduation. Entries in this report are arranged in the following pattern: (Refer to "Legend" at end of paper).

- Student's Registration No. \& Name
- Academic Year
- Semester - Registered (Acquired) GPA of Cr. Hours (Cr. Hours) Semester

Data shown in this table pertains to a batch of Electrical Engineering Students. To protect privacy, letters are used in place of student names.

## M.A. Sheirah and G.S.A. Shawki

Table (1.2), which represents, with numbers and names deleted, an example extracted from the Mechanical Engineering Discipline, comprises following components of a "General Summary Report":

## - Student's Registration No. \& Name

| - Starting | Country of <br> Date | Total No. of <br> Origin | Accumulated <br> Acquired | GPA |
| :---: | :--- | :--- | :--- | :--- | | Anticipated |
| :--- |
| Graduation |

The third system is so planned as to provide a very effective tool for obtaining statistical measures criteria and general trends of the educational process with its so many variables and components, Tables (3) and (4).

Table (3) exhibits the structure of this system which comprises 98 fields; these are detailed hereunder:

## Serial No.

$1-5$ : General information about the student
$6-8 \quad: \quad$ Status regarding Transfer to Faculty
$9-12$ : Information regarding Autumn of Year (1)
$13-16: \quad$ Information regarding Spring of Year (1)
$17-20$ : Information regarding Summer of Year (1)
21-32: Information for the 3 Semesters of Year (2)
33-92 : Information for remaining years : (3) to (7)
93-98 : Current status of student

Table 3 - Structure of Data-Base System (3)

M.A. Sheirah and G.S.A. Shawki

Table (4) reproduces "Screen Formats" for editing student's data. This format can be used for updating the status and current performance of the student for each semester.

Table 4 - Screen Format of Data-Base System (3)

## 3 - SALIENT EDUCATIONAL FEATURES FOR THE TEST CASE

## 3.1 - Student Populaton

The student population of the school has steadily increased since inauguration in October 1980 to reach some 140 students who attend offered courses regularly, Fig. (1).

Fig. (1) - Growth of engineering students since inauguration of Faculty in Oct. 1980.

## 3.2- Withdrawals

Withdrawals from the school are shown to be steadily decreasing with successive classes, Fig. (2). Regular students of the latest intake (October 1986) are 38 in number. Withdrawals have decreased from some $52.5 \%$ of students intake to some $18 \%$ in the current academic year, Fig. (3). Most student withdrawals seem to take place after the first $2-3$ semesters, Fig. (4). Should students endure the first few semesters, they are more likely to continue their engineering studies.
M.A. Sheirah and G.S.A. Shawki

Fig. (2) - Course of variation of number of students for the first seven classes.

Fig. (3) - Course of variation of Withdrawals since inauguration of Faculty in Oct. 1980.

Educational Performance of Students

Fig. (4) - Student Withdrawals versus Semesters attended.

Fig. (5) : Ratio of acquired credit hours to registered höurs for all regular students during their total period of attendance.

## M.A. Sheirah and G.S.A. Shawki

## 3.3-Students Performance

The present study shows that, on the average, students have, at present, an assimilation rate of some $87.5 \%$, i.e. out of 16 Cr . hours, the student is likely to gain only 14 Cr. hours, Fig. (5).

Comparison of classes, on basis of acquired credit hours per semester, shows that while the first and fourth classes display highest values, the sixth class exhibits lowest values, Fig. (6).

Fig. (6) - Acquired Credit Hours per Semester for the first Six Classes.

Judging by the Grade Point Average ${ }^{(1)}$ (GPA), there appears to be a steady improvement in students performance with semesters attended, Fig. (7). The first two classes display, as yet, highest GPA values, Fig. (8).
(1) See Legend for terminology used..

Educational Performance of Students

Fig. (7) - Average performance of engineering students during semesters attended.

Fig. (8) - Grade Point Average values for the first six classes.

## 4- GRADUATES

The first two classes, who graduated in 1985 and 1986, comprise only half of the students who enrolled in the college in the years 1980 and 1981, Figs. (9-12).

On tracing the performance of students who graduated with an order of merit: "Distinction" and "Very Good", Figs. (10) \& (12), it can be readily seen that relevant academic achievements are consistent. This would imply that these students well deserve their orders of merit and that the evaluation system in the school is quite sound. Lower rank students experienced improvements in their GPA attaining highest values at graduation semester. This may well serve as an example of how beneficial is the data-base package herein developed in indicating the reliability of the educational system used.

Fig. (9) - Performance of the First Class of Students.

## Educational Performance of Students

Fig. (10) - Semester Performance of students who graduated in the Class of 1985 (Class 1 ).

Fig. (11) - Performance of the Second Class of students.

Fig. (12) - Semester Performance of students who graduated in Class of 1986 (Class 2).

## 5 - CONCLUSIONS

The following conclusions may be drawn:
A- The data-base package, herein developed, proved to be quite effective in institutional studies and can be used in and readily adapted to any educational system. Performance data and relevant correlations may well be implemented for improving or otherwise changing the contents of course offered, for better adjustment of scheduling, for more efficient advising etc.

B- For the specific case dealt with in this paper, viz. the newly established Faculty of Engineering, the following features are evident:

1. The drop in student withdrawals and the increase in the number of students regularly attending offered courses indicate that the school has established itself and has succeeded in recruiting and motivating a more suitable intake. Moreover, the academic guidance proved to be quite influential. Optimum student performance is shown to be attained at some 14 Cr . hours per semester.
2. The steady improvement in the Grade Point Average reflects measures taken towards recruitment of competent Faculty of supporting staff, also the enhancement of laboratory, workshop and computer facilities in the school.
3. Only some $50 \%$ of the students intake graduate in 10 semesters.
4. The consistency of academic achievement, especially for graduates with higher ranks, inspired confidence in guidance, instruction and evaluation systems in the school.

## LEGEND

| $(*)$ | $:$ Indicates that the student has graduated. |
| :--- | :--- |
| (W) | refers to a withdrawn student. |

[^2]
[^0]:    * Professor and Head of Electrical Engineering Department.
    ** Professor and Dean, Faculty of Engineering.

[^1]:    * Quit after A-83

[^2]:    A "D" average or a GPA below 3 on a 5.0 scale is considered in the U.S. insufficient for graduation, but is sufficient at this institution.
